ARCOptix FT-IR *Rocket*

Mid-IR Fourier-transform spectrometer (2-6 or 2-12 μm)

If you are looking for high performance & compact Mid-IR spectrometer, that can operate both free-space or with IR optical fibers, the ARCOptix FT-IR Rocket is the instrument that you need. Thanks to its permanently aligned interferometer and solid-state reference laser, the FT-MIR Rocket offers excellent stability in both intensity and wavelength scales. Two spectral ranges are available, depending on your needs for high sensitivity or broad spectral range.

■ Benefits

- Two detector choices: 2-6 μm or 2-12 μm
- Very good sensitivity (2-stage & 4-stage cooled MCT detectors)
- High resolution of 4 cm^{-1}
- Excellent stability in intensity and wavelength
- Removable fiber coupler for operation with fibers or free-space IR beams

■ Applications

- Mid-IR Optical Spectrum Analyzer (OSA) for MIR Lasers & LEDs
- Liquid, thin-film or gas measurement
- Material identification and quantification in various fields such as geology, food and beverage industry, ...
